EDUCATION

University of Waterloo

Waterloo, ON

Bachelor of Computer Science - Business Specialization

Expected Graduation: April 2027

Cumulative GPA : 3.92

Relevant Coursework: Operating Systems, Algorithms, Databases, Compilers, Data Structures, Application Development, Computer Architecture, Object Oriented Programming, Networks

TECHNICAL SKILLS

Languages: Python, C++, C#, C, SQL, Go, Java, JavaScript, Kotlin, R

Libraries/Frameworks: Pandas, Numpy, Matplotlib, Jupyter Notebooks, NextJS, ReactJS, NodeJS

Developer Tools: Linux, Git, GitHub, VSCode, Visual Studio, Bash, AWS, Azure, PostgreSQL

EXPERIENCE

Software Engineering Intern

Sept 2025 – Present

Palona AI

Menlo Park, CA

- Spearheaded a page version control system end to end with **PostgreSQL**, **Python** backend, and **JavaScript** frontend, **reducing 100% of data loss** from simultaneous edits
- Created Python-based **web scraping pipelines** to extract company information from website URLs, exposing results through **RESTful API** endpoints

Software Developer Intern

Jan 2025 – Apr 2025

Geotab

Toronto, ON

- Enabled multi-parameter trip sorting by developing a **custom backend API** in **C#**, which was integrated into a **React frontend**, supporting **five distinct sort criteria**
- Implemented **site-wide** group filter functionality on MyGeotab, leveraging global URL state to **synchronize** and apply selected filters across the entire application
- Optimized frontend performance by **refactoring state management logic** with React Query, **reducing API call redundancy by 40%** and improving perceived responsiveness

Software Developer Intern

May 2024 – Aug 2024

Moody's

Toronto, ON

- Engineered a **relational database** to **automate** reserve component detection across **5 modules** using **SQL** queries, replacing manual iteration and **improving calculation runtime by 7%**
- Attained a **12% reduction** in C++ **compilation time** by refactoring reserve component storage into modular libraries
- Generated real-time **error walk-throughs in C++** for Moody's AXIS custom feature codes, guiding users through fixes for calculation issues and **increasing customer satisfaction by 16%**

Business Development Intern

May 2023 – Sept 2023

Safeline Group of Companies

Concord, ON

- Developed a **Python** program with automation capabilities to analyze and compare **over 1 million words** across several legislations, pinpointing critical variances to update
- Implemented a **file cataloging system** in **VBA**, featuring a **user-friendly interface** that dynamically tracked, updated, and managed all company files as they were added or removed
- Designed an integrated internal company website using **Microsoft SharePoint**, centralizing all essential resources within a unified digital domain for **enhanced accessibility** and productivity

Software Developer Intern

Sept 2020 – Jan 2021

CYR Funding

Markham, ON

- Leveraged **smtplib** and **pandas** in Python to automatically iterate through clients in the customer database and send monthly newsletters to increase outreach which boosted **sales by 15%** across the term
- Built a **custom VBA UI** that streamlined Excel-based customer data entry with **guided inputs** and automatic post-submission sorting, **reducing entry time by 45%**

PROJECTS

LiftOff | Kotlin, Postgres, Supabase, Android Studio | 📄

Dec 2024

- Produced an **Android application** in **Kotlin** to generate personalized workout plans, manage fitness schedules, and deliver workout notifications
- Implemented a cloud-hosted backend with **Supabase**, leveraging **Postgres** for efficient database management
